Dear Hiring Manager,

I'm a Mechatronics engineering student and a Web Developer with hands-on experience in designing and deploying responsive web applications using HTML, CSS, JavaScript, React.js, Next.js and even OOP. My work spans both frontend design and backend integration, giving me a full-stack perspective.

During my internships , I built and optimized websites, developed chrome extensions, converted Figma designs into responsive interfaces, and integrated APIs for automation and data handling.

I have a solid understanding of hosting environments, SSL, domain management, and version control using Git/GitHub.

I am a proactive problem-solver and comfortable working both independently and remotely.

I've developed multiple projects such as an AI-powered Job matcher, a Chrome Autofill Extension, Edgeboard with real authentication and a Crime Control Robot Dashboard, all of which demonstrate clean and modular code.

I'm familiar with Bootstrap, CRON jobs, API integration, and CMS platforms like WordPress and Elementor plugin.

In short, I bring a combination of technical expertise, creative problem-solving, and a strong learning mindset , making me an excellent fit for your team and culture.

Sincerely,

Muhammad Maaz Khalid
